the data storage device contains a representation of a model of the collaborative activity in the storage device, the model of the collaborative activity including model entities, the model entities providing access to information concerning the collaborative activity, being organized into a plurality of hierarchies having a plurality of types, and a given model entity being capable of simultaneously belonging to a hierarchy having one of the types and a hierarchy having

another of the types and a program which, when executed in by the processor, implements the system set forth in claim 211, provides a graphical user interface to a person of the persons for providing outputs to the person and responding to inputs from the person by performing operations on a model entity as limited by a type of access which the person has to the model entity, the operations including controlling access to the model entity, creating, modifying, and/or deleting the model entity, assigning the model entity to a location in a hierarchy, accessing and/or modifying the information concerning the collaborative activity via the model entity, viewing model entities as ordered by a hierarchy to which the entities belong, and viewing model entities as ordered by a value in the information concerning the collaborative activity to which the entities give access.

210. (Currently amended) A data storage device, the data storage device being characterized in that:

the data storage device contains a model of the collaborative activity, the model including representations of model entities, a given representation of a model entity being capable of simultaneously belonging to hierarchies including a hierarchy and another hierarchy, and the representations of model entities providing access to information relating to the collaborative activity and further contains a program which, when executed by a in the processor, implements the method set forth in claim 198, a method of supporting management of a collaborative activity by persons involved therein, the persons not being specialists in information technology, comprising the steps of:

receiving a definition of a model entity belonging to the model of the collaborative activity from a person of the persons via the interface and responding thereto by producing a representation of the model entity; and

receiving a first indication of a first hierarchical relationship between the model entity and another model entity belonging to the hierarchy from the person via the interface and responding thereto by relating the model entity to the other model entity in the hierarchy and receiving a second indication of a second hierarchical relationship between the model entity and a third model entity belonging to the other hierarchy from the person via the interface and responding thereto by relating the model entity to the third model entity in the other hierarchy.

211. (currently amended) A system for supporting management of a collaborative activity by persons involved therein, the persons not being specialists in information technology, the system being implemented using a processor and a storage device accessible to the processor, and the system comprising:

a representation of a model of the collaborative activity in the storage device, the model of the collaborative activity including model entities, the model entities providing access to information concerning the collaborative activity, being organized into a plurality of hierarchies having a plurality of types, and a given model entity being capable of simultaneously belonging to a hierarchy having one of the types and a hierarchy having another of the types; and said processor being configured to provide a graphical user interface for the system, the graphical user interface being provided by the processor which the processor provides to a

person of the persons ~~for the processor~~ providing outputs ~~via the graphical user interface~~ to the person and responding to inputs ~~via the graphical user interface~~ from the person by performing operations on a model entity as limited by a type of access which the person has to the model entity, the operations including controlling access to the model entity, creating, modifying, and/or deleting the model entity, assigning the model entity to a location in a hierarchy, accessing and/or modifying the information concerning the collaborative activity via the model entity, viewing model entities as ordered by a hierarchy to which the entities belong, and viewing model entities as ordered by a value in the information concerning the collaborative activity to which the entities give access.
